- 5 Summary

INTRODUCTION

I'm a student from NPUST, Taiwan. From July 5th, I joined a 36-day exchange program at Maejo University, Chiang Mai. The program includes professional training and cultural experiences.

Learning Experience Share

1

3D printing technology

Design and operate 3D printing equipment-FDM

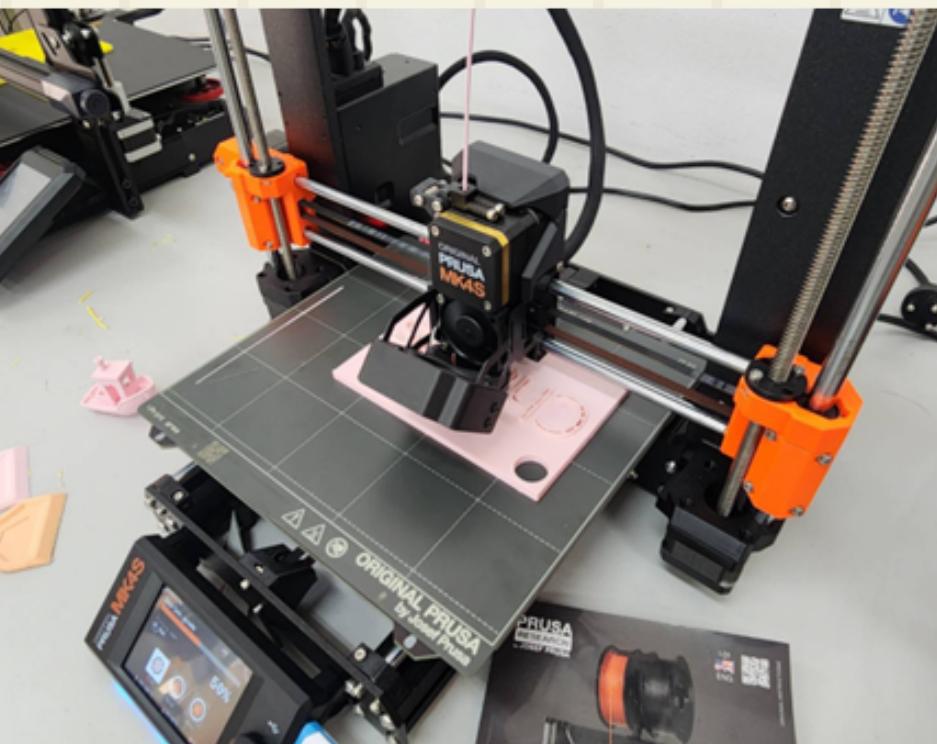

Figure 1. 3D Printing Equipment-FDM

Figure 2. Design patterns for 3D printing

Learning Experience Share

2

Farm Robots

This course explores the use of farm robots for tasks like seeding and watering, focusing on both DH parameters in robotics and their operational modes.

Figure 3. DH Convention Overview

Figure 4. Learning Farm Robots

Learning Experience Share

3

AMR project

Learned to operate and navigate Autonomous Mobile Robots (AMRs), focusing on route planning, obstacle avoidance, and task execution.

Learned to control a quadruped robot(robot dog) with emphasis on mobility and navigation.

Learning Experience Share

4

Smart Farming with Drones

The drone follows a preset flight path to capture and upload images, then automatically generates a topographic map through terrain measurement and image processing.

Figure 6. Flight Path Planning

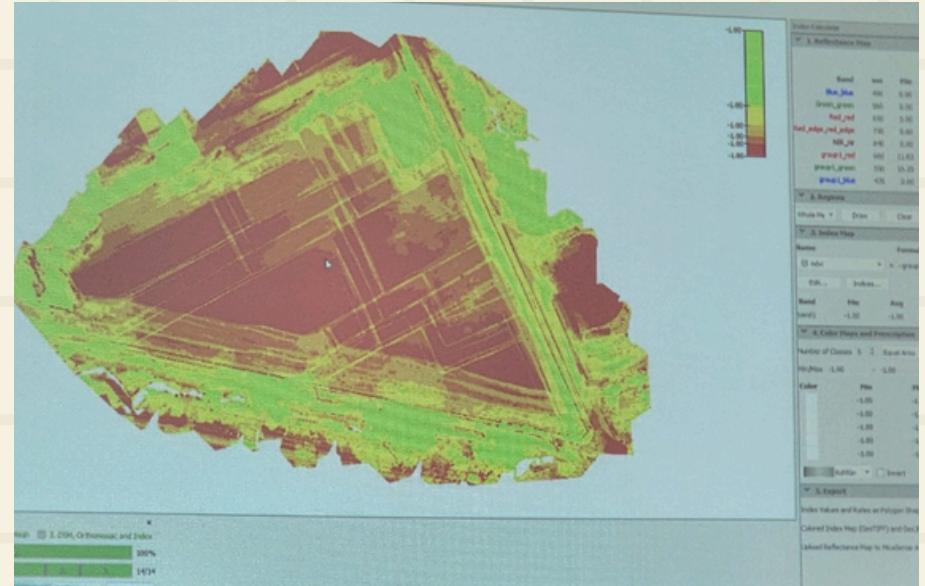

Figure 7. Topographic Map Generation

Learning Experience Share

4

Smart Farming with Drones

Conducted tests to evaluate fertilization accuracy and flight performance under real farm conditions.

Figure 8. Drone watering measurement

Figure 9. Drones watering fertilizers

Learning Experience Share

5

Biochar project

Using rice straw as raw material, we produced biochar through pyrolysis and analyzed its properties. This process showed how biochar supports soil health and sustainability by recycling agricultural waste.

Learning Experience Share

5 Biochar project

Using the IKA calorimeter, we accurately measured the energy content of biochar samples.

The XRF analyzer quickly identified their mineral composition, offering key data for evaluating soil improvement.

Homework Submission Pressure

CONCLUSION

The 36-day program at Maejo University provided hands-on experience and cultural exchange. Projects like AMR, Biochar, and Farm Bot enhanced our skills and understanding of smart agriculture.

“Special thanks to NPUST, Taiwan and MJU, Thailand”

THANK YOU
